

1. Role-Based User Access

- **Students, Alumni**, and possibly **Admin** users with distinct capabilities.
- **Role-based access control** ensures that each user type has appropriate permissions (e.g., posting events, updating profiles).

2. User Registration & Profile Management

- Students and alumni can **register**, create their profiles, and log in.
- Profiles likely include personal and professional details to help identify matches and networking interest.

3. Networking and Connections

- Ability to **search for** and **connect with** peers based on criteria like batch, department, skills, or interests.
- Alumni can serve as mentors to current students, enabling structured mentoring interactions.

4. Job and Opportunity Listings

- Alumni (and possibly admins) can **post job or internship opportunities**.
- Students can **view and apply** to these listings, bridging career connections.

5. Event Management

- Features like an **event calendar** or announcements for webinars, talks, reunions.
- Students and alumni can **register** or get notified about upcoming events either automatically or on demand.

6. Messaging or Communication Tools

- Some platforms include direct **messaging**, **forum**, or **blog-style features** for alumni-student interaction.
- Notifications (e.g., via email or in-site alerts) may be part of the communication workflow.

7. Administrative Oversight

- **Admin functionality** to confirm registrations, manage events, moderate posts, or approve alumni/student submissions—ensuring data integrity.
